

Silloway Networks

**One of the main
cyber-risks is to think that they don't exist.
The other is to try and treat all potential risks.
Fix the BASICS - focus on what matters
for your business and be ready to react
to pertinent threats.**

security assessment

What is Information Security and Cybersecurity?

All organizations use information. Protecting the information an organization creates, uses or stores is called 'Information Security'. Information Security encompasses people, processes, and technologies. Information Security focuses on protecting:

- Confidentiality (Protecting information from unauthorized access)
- Integrity (Protecting information from unauthorized modification)
- Availability (Preventing disruption of your access to information)

Cybersecurity is a key component of Information Security. Cybersecurity mean protecting electronic devices and electronically stored information.

What is a Network Security Assessment?

A Network Security Assessment will identify the current security posture of an information system or organization. The assessment provides recommendations for improvement, which allows the organization to reach a security goal that mitigates risks

How will this Assessment benefit my organization?

Understanding and improving your organization's Information Security through our Network Security Assessment will result in a Cybersecurity Framework. The Framework helps you to keep your business safe. You will see benefits in 5 key categories:

1. **IDENTIFY** (control access, policies and procedures, user accounts)
2. **PROTECT** (limit access, firewall, surge protectors, patches, filters, encryption and training)
3. **DETECT** (malware detection, monitoring, and virus protection)
4. **RESPOND** (plan for disaster and information security incidents)
5. **RECOVER** (backup, cyber insurance, on-going refining of process)

What is the process?

Our Network Security Assessment consists of 5 guided steps many which you will complete online using simple forms. The results are submitted to us for analysis and added to your Project. Results will be customized in a report with recommendations.

- Define your assets
- Define your threats
- Assess current Security Performance
- Prioritize risks
- Formulate Security Solutions

How long does the Assessment take?

Typical time-frame is 1-2 weeks

How do I get started?

It's easy! Click the link below - fill out the form to get started.
