

Cloud-based email protection defends you from phishing emails in real-time

## IRONSCALES IronShield

IronShield adds another layer of advanced phishing security to the IRONSCALES platform by safeguarding users from all inbound emails.

## IRONSCALES IronSchool

An advanced platform that provides attack simulation and phishing awareness training, and continuously assesses individual employee behavior and skillsets through short simulated phishing scenarios.

## IRONSCALES Irontraps

Automated email phishing protection, detection and incident response. Eliminates the need for highly trained security analysts. Reduces the time from phishing detection to remediation from weeks or months to just seconds.

## IronScales Features

**Phishing Simulation & Training**  
Simulated for user awareness and training with a customized micro-learning methods.

**Phishing Emulator**  
Safely emulate the most current threats to find your email security gaps.

**Advanced URL Protection**  
Protect against zero-day malware, credential theft, and phishing websites.

**BEC Protection**  
Prevent email spoofing, impersonation and non-signature-based BEC attacks.

**Threat Hunting**  
Detect existing and emerging phishing threats in real time.

**AI-Powered Incident Response**  
Automate email phishing investigation, orchestration and response to just seconds.

- Inbox behavioral analysis
- Automated phishing forensics, orchestration and remediation
- Intuitive dashboard built for rapid response
- Attack simulation and phishing awareness training
- Provides real-time email content scanning of links and attachments
- Utilizes multiple best of breed sandbox and multiple anti-virus engines
- Improves efficiency of the security team with AI assisted email phishing classification
- Anonymously and automatically detects and shares email phishing attack intelligence

## IRONSCALES BASIC

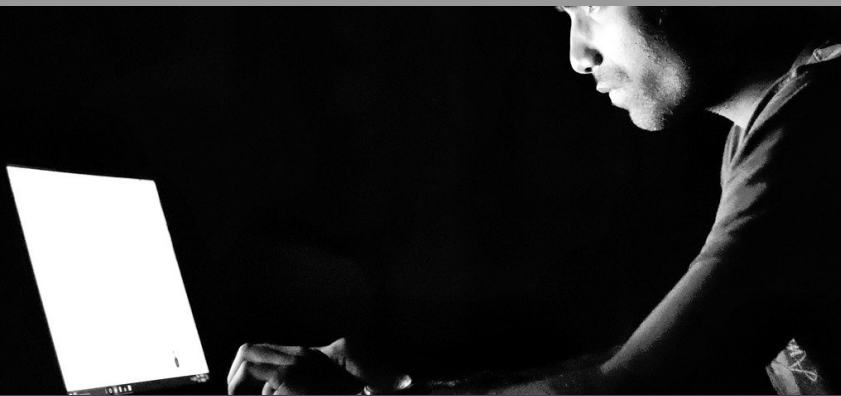

- **Irontraps** – the first and only automated email phishing protection, detection and incident response module, which eliminates the need for highly trained security analysts to manually deal with every email phishing threat, while reducing the time from phishing detection to remediation from weeks or months to just seconds.
- **IronSights** – an Advanced Mailbox-level Anomaly Detection module that protects users from business email compromise (BEC), email spoofing and impersonations attempts by dynamically learning their mailbox and communication habits.
- **Federation** – an automated and collective phishing campaign detection module that helps businesses to anonymously and automatically detect and share email phishing attack intelligence on the latest campaigns, helping to reduce the success of such attacks.

## IRONSCALES CORE

- All the features of Basic plus
- **Themis** – an AI-based anti-phishing tool that can help predict, with high confidence, the legitimacy of any suspicious emails. It works to reduce risk by resolving unknown phishing threats faster and improves efficiency by minimizing human intervention.
- **IronSchool** – an advanced platform that provides attack simulation and phishing awareness training, and continuously assesses individual employee behavior and skillsets through short simulated phishing scenarios.

## IRONSCALES CORE PLUS

- All the features of Core plus
- **IronShield** – a cloud-based email protection module that helps defend organizations from zero-day malware and phishing websites in real-time. Using state of the art sandbox and malicious link databases, IronShield adds another layer of advanced phishing security to the IRONSCALES platform by safeguarding users from all inbound emails.

Let the security experts at Silloway Networks help you succeed in meeting today's demanding compliance requirements.

Our tech team is ready to support you with network reviews, security reviews, risk assessments, assistance in filling out compliance questionnaires, and recommending the most cost effective security solution.
